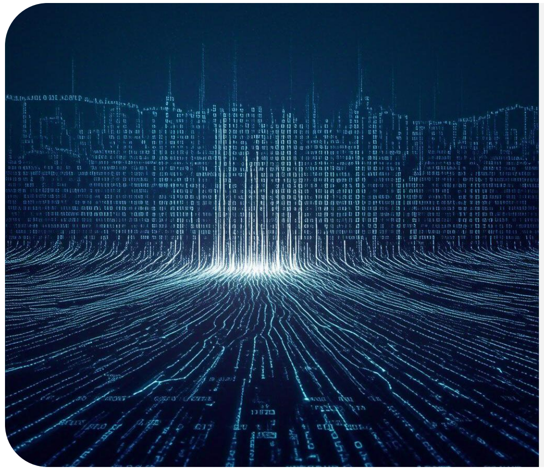
Introduction to Prompt Engineering

Transformative power of LLMs

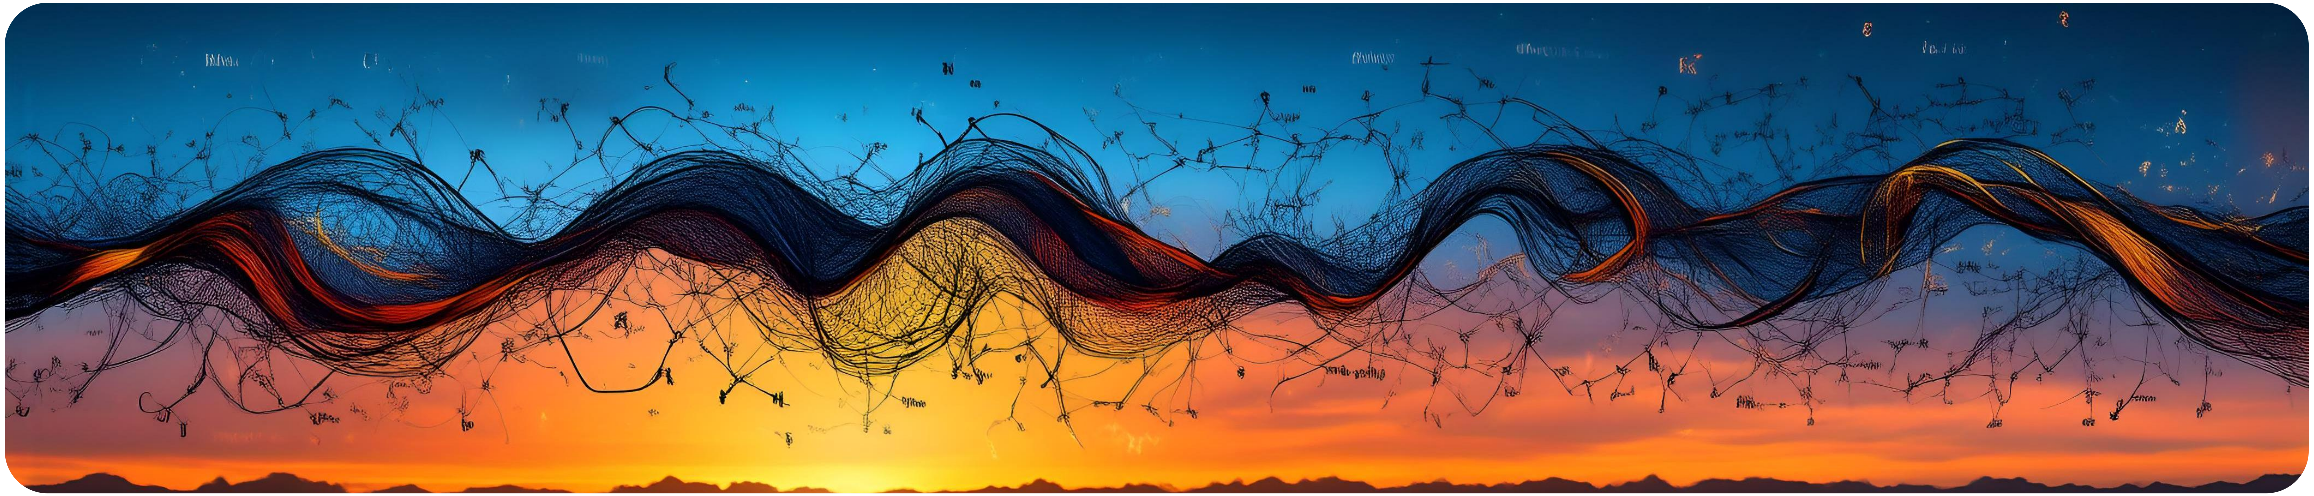


Hook: LLMs and communication bottleneck

The transformative power of Large Language Models (LLMs) and the bottleneck of communication.

LLM limitations

Addressing LLM limitations like hallucinations and outdated knowledge.



Definition and art of PE

PE as art and science

PE as the art and science of instructing LLMs for accurate, relevant, and creative responses.

Golden Rules of Prompting

The "Golden Rules" of effective prompting include clarity, context, examples, conciseness, constraints, and bias mitigation.

Importance in GenAI and saascv

01

PE in the age of GenAI

Why PE is essential in the age of Generative AI (GenAI).

02

PE in saascv field

The crucial role of saascv professionals in driving future AI innovation through expert prompting.

02

Core Principles of Effective Prompting

Clarity in desired outcomes

Explicit desired outcome

Be clear about what you want the LLM to achieve with your prompt.

Avoid ambiguity

Ensure the prompt is specific and leaves no room for misinterpretation.

Providing sufficient context

Background information

Offer enough context for the LLM to understand the task at hand.

Helpful for complex tasks

Sufficient context is crucial for complex requests to be accurately fulfilled.

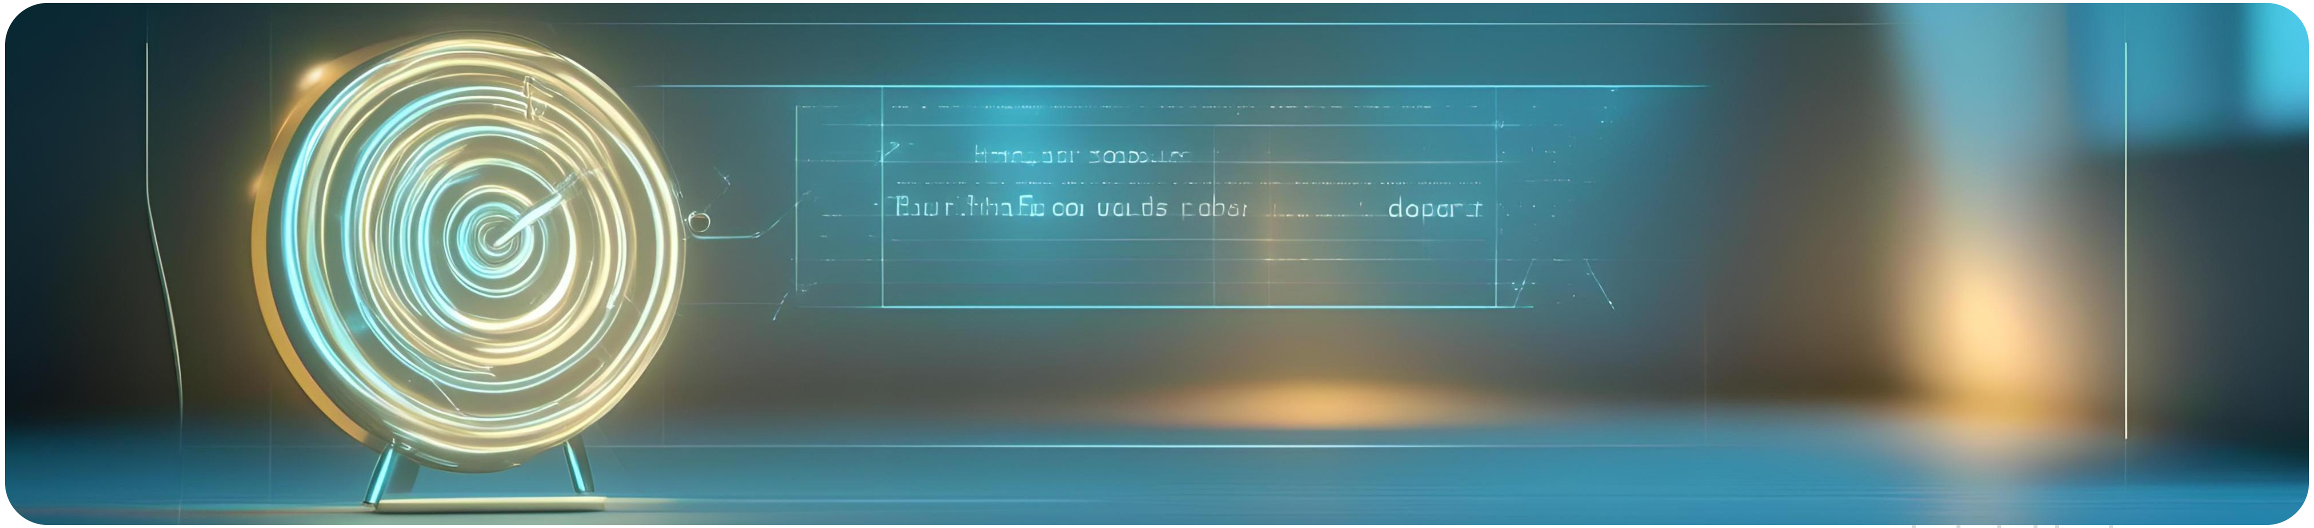
Using few-shot examples

Show, don't just tell

Use examples to demonstrate the desired output format or content.

Efficient learning

Few-shot examples help the LLM quickly grasp the task requirements.



Conciseness in prompts

Focused prompts

Keep prompts brief and to the point to avoid overwhelming the LLM.

Avoid unnecessary info

Omit any details that are not essential to the task at hand.

Setting constraints and rules

Define boundaries

Set clear constraints such as word count or format to guide the LLM.

Rules for consistency

Establish rules to ensure the response meets specific criteria or standards.

Mitigating bias in instructions

Fair and neutral prompts

Craft instructions that are unbiased to prevent skewed responses.

Avoiding stereotypes

Be mindful of language to prevent perpetuating stereotypes or prejudices.

03

Practical Applications of Prompt Engineering

Text generation techniques

Crafting stories and articles

Using PE to generate engaging narratives and informative content

Content creation for marketing

Applying PE to produce targeted marketing materials and advertisements

Question answering strategies

01

Retrieving accurate responses

PE enables the generation of precise and informative answers to user queries

02

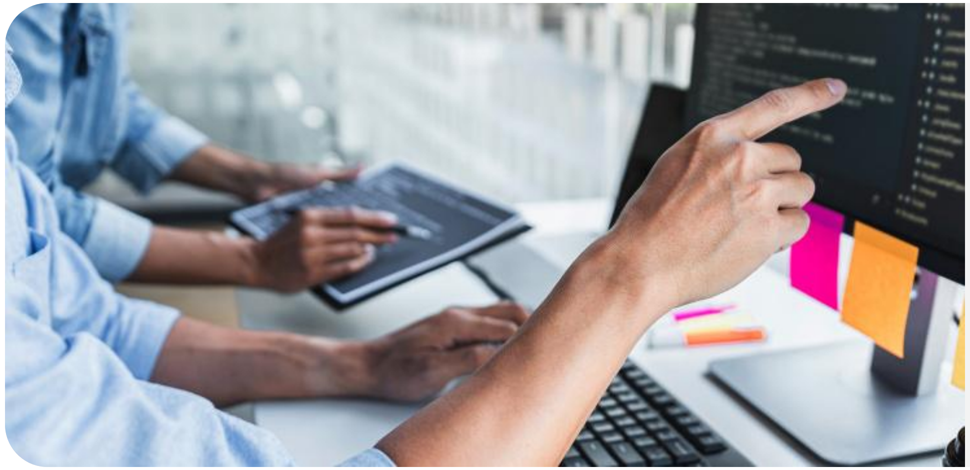
Informative response generation

PE techniques help in formulating responses that are both accurate and helpful

Code generation in SaaS

Turning language into code

PE facilitates the conversion of natural language descriptions into executable code snippets



SaaS development efficiency

PE streamlines the development process in SaaS by automating code generation tasks

Text-to-image visualization

Visualizing concepts creatively

PE allows for the creation of images from textual descriptions, enhancing creative expression

Combining text with visuals

PE techniques enable the combination of textual prompts with image generation for innovative outputs

04

Prompt Engineering in Broader AI Landscape

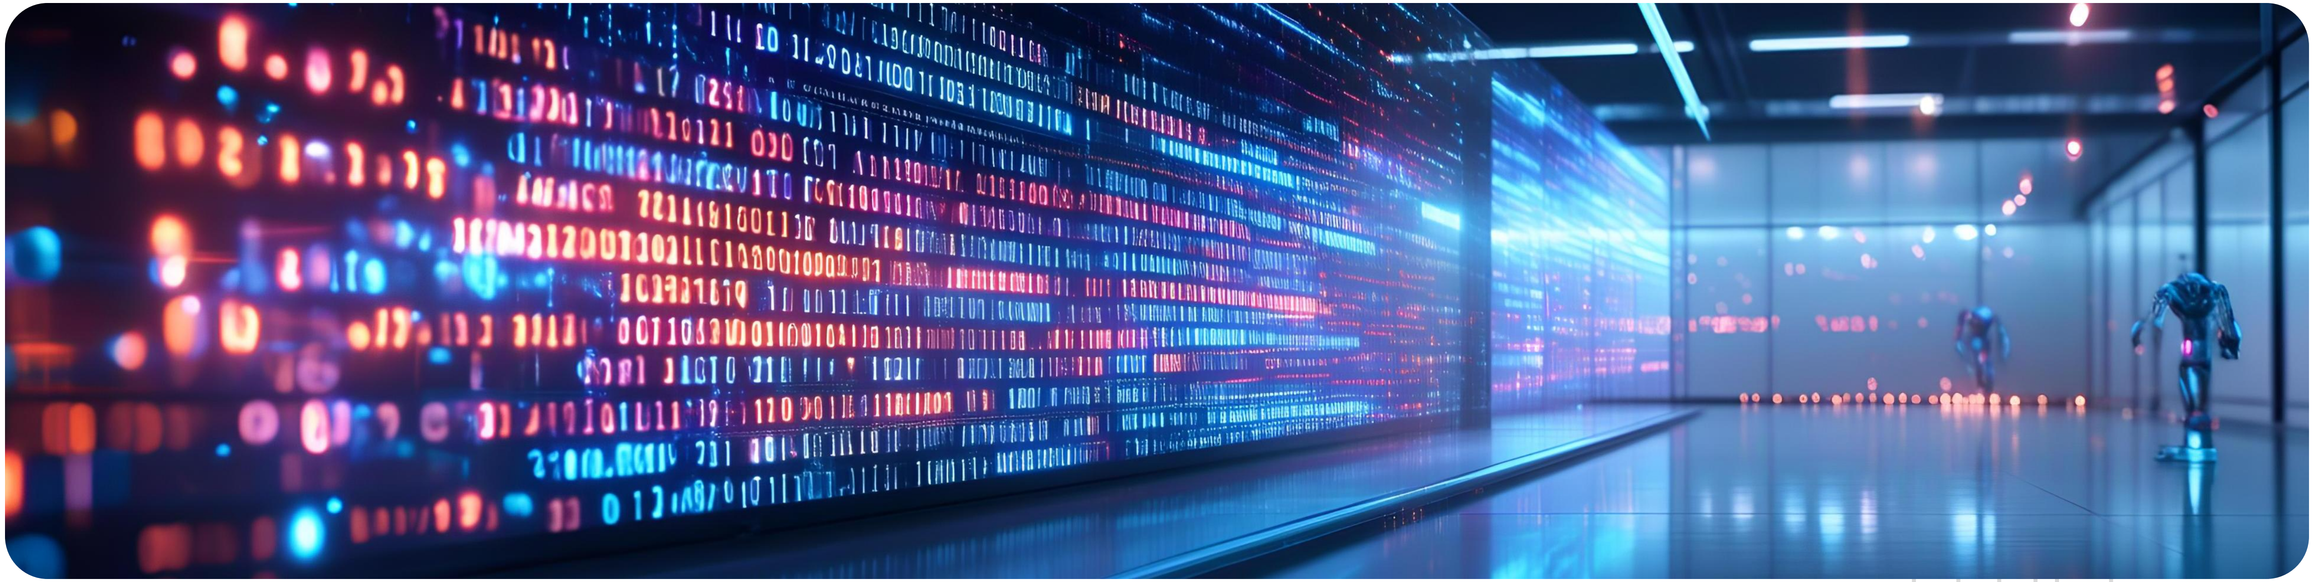
Generative AI overview

Definition and tools of GenAI

Generative AI creates new content, with tools like DALL-E and GPT.

Role in AI innovation

GenAI is pivotal in the saascv field, driving AI innovation.



Retrieval Augmented Generation process

Addressing LLM limitations

RAG combats hallucinations and outdated knowledge in LLMs.

Process of retrieval-generation

Involves database lookup, context enrichment, and response formulation.

LLM vs. SLM model comparison

01

Choosing the right model

Select between LLMs and SLMs based on performance, cost, and latency.

02

Performance, cost, and latency

Evaluate models on their ability to handle tasks efficiently and economically.

05

Agentic AI and Multimodality Future

Agentic AI for autonomous actions

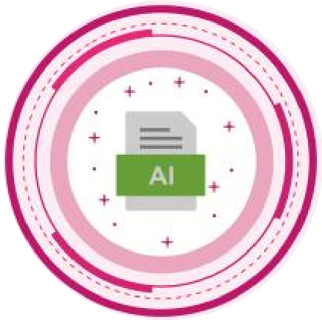
Beyond passive response

Agentic AI enables autonomous action, planning, and decision-making.

Autonomous action capabilities

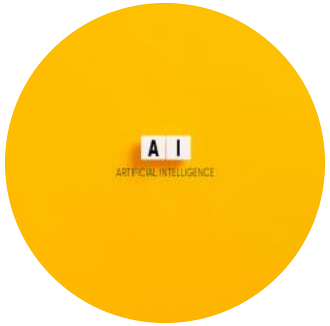
It moves from reactive to proactive behavior in AI systems.

Multimodal AI for human-like reasoning



Combining different data types

Multimodal AI understands and processes text, image, and audio.



Human-like reasoning

It aims to mimic human cognitive processes by integrating various data forms.

Role of saascv professionals in AI innovation

Driving AI innovation

saascv professionals are crucial in advancing AI through expert prompting.

Expert prompting skills

Their expertise in PE is essential for creating innovative AI applications.
